This work is supported by the Department of Homeland Security Science and Technology Directorate under contract number HSHQDC-13-C-B0028 and the United States Department of Agriculture under cooperative agreement 12-9208-0344-CA. We thank Dave Dargatz, Lori Gustafson, and Jason Lombard for invaluable feedback on the design and implementation of this survey.
Introduction

At the national scale there were 51 experts from 19 states and territories participating in the Cattle Movement Survey including Alaska, California, Colorado, Iowa, Idaho, Minnesota, Mississippi, Montana, North Carolina, Nebraska, Nevada, New York, Oklahoma, Pennsylvania, Tennessee, Texas, US Virgin Islands, Virginia and Wisconsin. At the final stage of the survey, there were 3 experts from Iowa participating. In general, the Iowa estimate for beef interstate shipments was similar to estimates at the Upper Midwest regional and at the national level. The Iowa estimate for dairy interstate shipments was similar to the Upper Midwest regional estimate and slightly higher than the national estimate. The estimated median number of shipments overall (questions 7–10c & 12–13c) in the beef section was 15 interstate shipments out of every 100 shipments. One question that had a large range of estimates at the state, regional and national levels asked for the number of interstate shipments moving to graze on public land (question 11). This type of movement may be less well understood by respondents than other movements included in the survey. For this reason, this question was left out of the overall beef shipment estimate. The estimated median number of shipments overall (questions 15–21) in the dairy section was also 15 interstate shipments out of every 100 shipments.

The national, Upper Midwest regional and Iowa level results for each survey question are presented below and in Appendix I. For each question the national, regional, and state results are presented in separate color-coded box plots. On the national box plot the state specific median is shown as a red X for comparison. Additionally, the median and weighted mean are presented for each question in the survey. Explanations of the box plots (Figure 1) and weighted means can be found below. The first question reported in the results is question 6 because the first 5 questions dealt with participant information.
Figure 1: **Example box plot.** The box plots in this report are on a scale from 0 to 100. The national box plots are black, the Upper Midwest plots are purple and the state plots are in red. The center bar of the box represents the median and the edges of the box show the 1st and 3rd quartiles. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are considered outliers and are shown on the plots as open circles. Box plots without whiskers do not have points that extend beyond the 1st and or 3rd quartiles. The red X on the national plots corresponds to the state median.
Weighted means: The national and regional means presented in this report have been weighted, meaning that some data points contribute more than others to the overall mean. This was done to allow data points from states with larger cattle populations to have greater weight. Specifically, states were weighted by the beef and dairy cattle inventory data from the 2015 National Agricultural Statistics Service annual report.

**Acknowledgements**

This work is supported by the Department of Homeland Security Science and Technology Directorate under contract number HSHQDC-13-C-B0028 and the United States Department of Agriculture under cooperative agreement 12-9208-0344-CA. We thank Dave Dargatz, Lori Gustafson, and Jason Lombard for invaluable feedback on the design and implementation of this survey.

We extend a particular thank you to the experts who participated in this survey. Without the support of the 51 experts who participated this survey would not have been a success.
Beef Shipments
6. Consider 100 farms or ranches that have beef cattle. How many of these farms will routinely send cattle out of the state?

**National**, Median: 44.58; Weighted mean: 42.21

**Upper Midwest**, Median: 39; Weighted mean: 52.38

**Iowa**, Median: 70; Weighted mean: 61.67

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
7. Consider 100 shipments of beef cattle and calves originating from operations that have herds of the following sizes. For each of the following, out of 100 shipments, how many will leave the state?

(a) Herds with 1-49 head

**National**, Median: 20; Weighted mean: 26.67

![Box Plot for National Median and Weighted Mean](image1)

**Upper Midwest**, Median: 18.33; Weighted mean: 25.92

![Box Plot for Upper Midwest Median and Weighted Mean](image2)

**Iowa**, Median: 20; Weighted mean: 33.33

![Box Plot for Iowa Median and Weighted Mean](image3)

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(b) Herds with 50-99 head

**National**, Median: 32.35; Weighted mean: 29.65

![National Box Plot]

**Upper Midwest**, Median: 36.67; Weighted mean: 33.88

![Upper Midwest Box Plot]

**Iowa**, Median: 30; Weighted mean: 40

![Iowa Box Plot]

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(c) Herds with 100-199 head

National, Median: 41.25; Weighted mean: 36.65

Upper Midwest, Median: 25; Weighted mean: 43.86

Iowa, Median: 50; Weighted mean: 56.67

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(d) Herds with 200 or more head

**National**, Median: 48.75; Weighted mean: 45.19

**Upper Midwest**, Median: 45; Weighted mean: 58.51

**Iowa**, Median: 80; Weighted mean: 71.67

**Box Plots**: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
8. Consider 100 shipments of beef cattle and calves originating at the following types of operations. For each of the following, out of 100 shipments, how many will leave the state?

(a) Seedstock operation

**National**, Median: 42.5; Weighted mean: 41.33

![Box Plot for National Seedstock Operation]

**Upper Midwest**, Median: 40; Weighted mean: 35.09

![Box Plot for Upper Midwest Seedstock Operation]

**Iowa**, Median: 40; Weighted mean: 30

![Box Plot for Iowa Seedstock Operation]

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(b) Cow-calf operation

**National**, Median: 41.25; Weighted mean: 39.19

**Upper Midwest**, Median: 35; Weighted mean: 42.57

**Iowa**, Median: 50; Weighted mean: 50

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(c) Backgrounder operation

**National**, Median: 41.96; Weighted mean: 41.1

![Box Plot National](image)

**Upper Midwest**, Median: 40; Weighted mean: 38.72

![Box Plot Upper Midwest](image)

**Iowa**, Median: 40; Weighted mean: 43.33

![Box Plot Iowa](image)

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(d) Stocker operation

**National**, Median: 43.21; Weighted mean: 41.11

**Upper Midwest**, Median: 40; Weighted mean: 41.11

**Iowa**, Median: 30; Weighted mean: 40

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(e) Feedlot

**National**, Median: 53.33; Weighted mean: 40.17

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.

**Upper Midwest**, Median: 56.67; Weighted mean: 58.79

**Iowa**, Median: 50; Weighted mean: 56.67
(f) Market or Salebarn

**National**, Median: 57.63; Weighted mean: 46.33

![Box Plot for National](image)

**Upper Midwest**, Median: 56.67; Weighted mean: 51.17

![Box Plot for Upper Midwest](image)

**Iowa**, Median: 50; Weighted mean: 56.67

![Box Plot for Iowa](image)

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
9. Consider 100 shipments of beef cattle and calves from anywhere in your state traveling to the following types of operations. For each of the following, out of 100 shipments, how many will leave the state?

(a) Feedlot

**National**, Median: 52.17; Weighted mean: 42.49

**Upper Midwest**, Median: 53.33; Weighted mean: 50.39

**Iowa**, Median: 40; Weighted mean: 53.33

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(b) Market or Salebarn

**National**, Median: 25.5; Weighted mean: 28.65

![Box Plot for National Market or Salebarn](image)

**Upper Midwest**, Median: 26; Weighted mean: 16.29

![Box Plot for Upper Midwest Market or Salebarn](image)

**Iowa**

Results omitted to protect confidentiality

---

**Box Plots:** The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
19. Consider 100 shipments of pre-weaned dairy steers or bulls from anywhere in your state traveling to the following locations. For each of the following, out of 100 shipments, how many will leave the state?

(a) Calf-ranch/nursery

**National**, Median: 23.75; Weighted mean: 15.83

Upper Midwest, Median: 25; Weighted mean: 27.77

Iowa
Results omitted to protect confidentiality

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(b) Feedlot

**National**, Median: 38; Weighted mean: 27.46

Upper Midwest, Median: 32.5; Weighted mean: 34.03

**Iowa**
Results omitted to protect confidentiality

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
(c) Market or Salebarn

**National**, Median: 25; Weighted mean: 30.04

![Box Plot for National](image)

**Upper Midwest**, Median: 23.75; Weighted mean: 23.47

![Box Plot for Upper Midwest](image)

**Iowa**
Results omitted to protect confidentiality

Box Plots: The center bar and edges of the box show the median and 1st and 3rd quartiles, respectively. The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
20. Consider 100 shipments of weaned heifers or pregnant heifers originating at a heifer-raising facility. Of these 100 shipments, how many will leave the state?

**National,** Median: 25; Weighted mean: 19.28

**Upper Midwest,** Median: 31.25; Weighted mean: 28.1

**Iowa**  
Results omitted to protect confidentiality
21. Consider 100 shipments of dairy bulls from anywhere in your state that are moving for breeding purposes. Of these shipments, how many will leave the state?

**National**, Median: 18.75; Weighted mean: 13.68

[Box Plot for National data]

**Upper Midwest**, Median: 38; Weighted mean: 25.6

[Box Plot for Upper Midwest data]

**Iowa**
Results omitted to protect confidentiality

The whiskers extend to points that are no more than 1.5 times the interquartile range, points outside this range are outliers (open circles). The red X on the national plots corresponds to the state median.
Appendix I:

Table of cattle movement results by survey question

*Overview:* The results from the Iowa cattle movement survey are presented below. Additionally, the results from the national level survey and the Upper Midwest regional survey (which includes Iowa, Minnesota, and Wisconsin) are presented. At the national level there were 51 experts from 19 states and territories participating in the cattle movement survey including Alaska, California, Colorado, Iowa, Idaho, Minnesota, Mississippi, Montana, North Carolina, Nebraska, Nevada, New York, Oklahoma, Pennsylvania, Tennessee, Texas, US Virgin Islands, Virginia and Wisconsin. For each question the national, regional, and state results are presented in color-coded table cells. Results from questions with fewer than three experts responding are not reported in order to protect expert confidentiality. An explanation of the weighted means can be found below.

Weighted means: The national and regional means presented in this report have been weighted, meaning that some data points contribute more than others to the overall mean. This was done to allow data points from states with larger cattle populations to have greater weight. Specifically, states were weighted by the beef and dairy cattle inventory data from the 2015 National Agricultural Statistics Service annual report.
